

, Dear European citizens,

I'm so thrilled to be living in this time of our history, the human race is finally doing it, we are going out there to explore the unknown, and our great continent is yet again being the pioneer in exploration. We are the avant-garde of what one day will be a united mankind. But to assure that everything will go smoothly, our continent has to be bold, innovative, open-minded and strong. The burden on our shoulders is immense. The actions that we take now will be judged by our descendents. The next elections are crucial not only for Europe, but for the development of the entire planet and its own stability. That's why I'm asking you to ponder my words before casting your vote. Do we really want to be ruled by a party that had the power to create this Federation for over 90 years and simply did nothing? Do we really want to be ruled by a party that thought that an intergovernmental Europe was the best Europe possible? Do we want a party composed by people that supported the austerity? Do we want a party that prevented our continent to spread its own wings because it was "impractical" to have a European Federation? Well I say no, we don't want it. We could've prevented the nuclear strikes that took so many lives in Europe in 2025, we could've prevented the 2007-2018 economic crisis, we could've introduced Russia into the EU after the collapse of the Soviet Union if a proper European Federation was in place way at the time. But no, the people from this party decided that we had to be the lap dogs of the americans for one hundred years. We are fed up of this short sighted party, they strangled us for too long. They are simply inadequate and untrustworthy to lead us to the stars.

That's why I'm asking you to give us your preference, we will fight for our future in space by creating new permanent installations across the solar system and beyond, we will fight for the serenity of all european citizens by increasing social spending thanks to our new incomes from space, we will fight to tackle the climate change by providing financial support to our scientific community. We will also fight to establish peaceful relations with other species, because our race is still very young, and we might have a lot to learn from the others.

For a Europe of the people!
Long live Earth!
Long live Europe!

Elly Schlein, secretary of the European Socialists and Democrats
